WHAT REALLY MAKES A GOOD BUILDING?

Abstract: Is it possible to identify the factors that can make a good building? Thankfully or not, architecture is far more complicated than a simple yes or no answer to this question and after all a “good building” is a combination of many things happening simultaneously. The main objective of this paper is to mention, analyse and clarify the numerous factors that play an essential role in order to understand how a “good building” can be translated in architectural terms. The purpose of this research is to identify the important elements of “good architecture”.

Keywords: good architecture, building design, important design elements, design procedure
